Water, Air, & Soil Pollution is an international, interdisciplinary journal on all aspects of pollution and solutions to pollution in the biosphere. This includes chemical, physical and biological processes affecting flora, fauna, water, air and soil in relation to environmental pollution. Because of its scope, the subject areas are diverse and include all aspects of pollution sources, transport, deposition, accumulation, acid precipitation, atmospheric pollution, metals, aquatic pollution including marine pollution and ground water, waste water, pesticides, soil pollution, sewage, sediment pollution, forestry pollution, effects of pollutants on humans, vegetation, fish, aquatic species, micro-organisms, animals, ecological implications of pollution and pollution models. *Water, Air, & Soil Pollution* also publishes manuscripts on methods used in the study of environmental pollutants, environmental toxicology, environmental biology, environmental engineering related to pollution, biodiversity as influenced by pollution, environmental biotechnology as applied to pollution (e.g. bioremediation), environmental modelling and biorestoration of polluted environments.

Water, Air, & Soil Pollution publishes research letters (short communications of significant research generally not exceeding 6 journal pages), regular papers, reviews and book reviews. Special and topical issues are published in the companion journal *Water, Air, & Soil Pollution: Focus.*
